Lloyd,

We have PII and security issues too regarding well locations and private residence data. All documentation that we share with you is okay to have all data. Thus I requested a privacy access on these maps. But, anything going to the public requires redacting PII and locations for the wells, which will require manual re-working before distribution should we get a FOIA (we are working on how best to do this- thus far, I believe we will remove data from the spread sheets that are linked to the GIS map)- our maps have a confidential not for distribution already on the maps.

If you have another concerns, please advise.

Thanks,

Arlene R. Anderson, Chief

Arlene/Doug

As per the below e-mail, staff are providing information to you about maps you have generated based on our sampling. I still am waiting for a response from another individual I asked to review your draft map. I expect that a map

or data table based on our data will be developed for distribution or showing at the Jan 14 meeting. One consideration in developing such is that we leave **exact addresses** out of any maps/ data that we show or distribute publicly. We try to respect private information as much as possible, and although it may get into the public arena through other means, we don't want to originate the distribution. The more specificity about a private residence that is presented publicly the more refusals we will get to participate in future sampling.

Thank you, and as I get more information about the maps you have shared I will make [redacted] feedback is provided.

Lloyd

Stephen, Ex. 6

All of the locations have their own well and I have updated the spreadsheet as requested.

Tim,

Can you tell me which sites in the November 19th round of samples (see the attached spreadsheet) are served by Village water and which are on private wells? As we've seen some residences might be within the distribution area but not hooked into public water and others may be outside the *village* boundary but still within the distribution area, which extends beyond the village and into the town in places. I'd appreciate it if you could just add to the empty column in the spread sheet "Y" for yes, site receives Village water, and "N" for no, the site is on a private well.

Steve

Steve,

Ex. 6

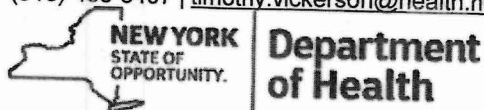

[REDACTED] Mountain View Way has a private well even though it is just within the WD boundary shown here:

Subject: [REDACTED] Mountain View Way

EX. 6

Lloyd, Timothy,

2.6 The residence at [REDACTED] Mountain View Way had no detection of PFOA. It is within the Village's distribution area, but residences don't always hook into public water if their well was giving satisfactory water. I'd just like to confirm that [REDACTED] Mountain View Way is in fact receiving public water from the Village wells.

Also, could you send me the shape files for the distribution-area boundary, so that I can overlay it on my maps?

I spoke to a person at the Hoosick Falls firehouse (518-686-7427) who said that PFC-containing foam hasn't been used in a training session for 3 or 4 years because of its expense. However, the department did use the foam on three occasions in fighting fires in the past year.

All the best,

Steve
